Topic: Certification of Augusto Santini's advisor

By the present letter I do certify that Augusto Santini is developing his Master studies under my supervision at the National Technological University in Buenos Aires. He is a Master student in Electronic Engineering program, therefore meeting the eligibility criteria for candidates to the Rosanna Degani Young Investigator Award.

The topic of his scholarship deals with signal processing of ECG. The work being submitted for the Rosana Degani award was mainly developed by him under my supervision. He has made a substantial and direct contribution to the conception of the work, he has developed the detection method and the setup for performance assessment, and is the main responsible for the analysis and interpretation of data, and for the authoring of the manuscript.

Sincerely,

Mariano Llamado Soria
Adjoint Professor
GIBIO, National Technological University
Buenos Aires, Argentina.
